Albuquerque Tingley Beach Restoration Project From Formulation To Restoration Completed in November, 2005

The project is located south of Central Avenue, between Tingley Drive and the Rio Grande, within the Rio Grande Waterway, Bernalillo County, Albuquerque, New Mexico. The project area is located immediately adjacent to the levee and jetty jacks of the Rio Grande Floodway. The ecosystem restoration project consists of approximately 15 acres of pond reconstruction, 9 acres of wetland restoration, and 48 acres of riparian woodland (bosque) restoration. The bosque would be restored by enhancing hydrology and native vegetation. Non-native salt cedar and Russian olive would be removed through brush cutting, root plowing and localized herbicide application.
